---

## SUMMARY

---

Full Stack Developer with 4+ years of experience designing and shipping production web applications end-to-end. Strong across the entire stack — from React and Next.js frontends to NestJS REST APIs, PostgreSQL databases, Redis caching, and cloud infrastructure. Proven track record delivering complete systems independently: scalable component architecture, secure authentication, third-party integrations (Stripe, OAuth 2.0, AI APIs), and deployment on Ubuntu VPS and serverless platforms. Comfortable owning projects from database schema design to production deployment.

## EXPERIENCE

---

### Full Stack Developer · Freelance & Contract

*Remote · 2021 – Present*

- Designed and delivered complete web applications using React, Next.js, and TypeScript on the frontend and NestJS with PostgreSQL and Redis on the backend — making architecture decisions independently from database schema to deployment.
- Built RESTful APIs with NestJS and Prisma ORM, implementing role-based access control, session-based authentication, payment webhook handling, and background job scheduling.
- Built responsive, accessible UIs with TailwindCSS, Shadcn UI, and Mantine UI; developed shared component libraries reused across multiple projects.
- Integrated third-party services end-to-end: Stripe (Checkout, webhooks, subscription management), QuickBooks Online OAuth 2.0 with AES-256-GCM token encryption, Cloudflare R2 object storage, and Claude AI API.
- Managed complex application state using TanStack Query for server-state synchronization and Zustand / Redux Toolkit for client state, keeping data flow predictable across large codebases.
- Configured CI/CD pipelines via GitHub Actions, managed Ubuntu VPS deployments, and shipped to serverless platforms (Vercel, Supabase).
- Delivered across multiple domains — ecommerce, SaaS, educational platforms, and data-heavy dashboards — consistently producing clean, maintainable code.

## PROJECTS

---

## Nordfiord · [nordfiord.com](https://nordfiord.com)

Complete ecommerce platform built solo. Next.js 15 App Router storefront with full SEO optimization (dynamic metadata, Open Graph, XML sitemaps) and Stripe-powered checkout; React 19 admin panel (Vite, TanStack Router, Mantine UI) with analytics dashboard, product management, order tracking, and role-based user moderation; NestJS REST API backed by PostgreSQL (Prisma ORM), Redis cart sessions, Cloudflare R2 image storage, and Stripe webhook handling. Deployed on Ubuntu VPS.

## Dueflo · [dueflo.com](https://dueflo.com)

AI-powered accounts receivable automation SaaS for US small businesses. Integrates with QuickBooks Online via OAuth 2.0 (CSRF protection, AES-256-GCM token encryption), syncs overdue invoices, and triggers a 6-step escalating email sequence over 45 days — each message AI-generated by the Claude API based on invoice amount, days overdue, and communication history. Background jobs via Trigger.dev. Built with Next.js 15 App Router, tRPC v11, Drizzle ORM, PostgreSQL (Supabase), Resend, and Stripe for subscription billing. Live production SaaS.

## SKILLS

---

<b>Languages</b>	JavaScript (ES2022+), TypeScript, HTML5, CSS3, SCSS
<b>Frontend</b>	React, Next.js, Redux Toolkit, Zustand, TanStack Query, TanStack Router, Vite, Webpack
<b>UI Libraries</b>	TailwindCSS, Shadcn UI, Mantine UI, Material UI, Radix UI, Framer Motion
<b>Backend</b>	Node.js, NestJS, tRPC, Drizzle ORM, Prisma ORM, PostgreSQL, MongoDB, Redis
<b>APIs &amp; Integrations</b>	REST, WebSockets, Stripe, QuickBooks OAuth 2.0, Claude AI API, Axios
<b>DevOps</b>	Git, GitHub Actions, Ubuntu VPS, Vercel, Cloudflare R2, Supabase
<b>Testing</b>	Jest, Vitest, React Testing Library

## EDUCATION

---

### Self-Taught Software Developer

*2021 – Present*

Built and shipped production-grade web applications through continuous hands-on practice, independent study, and real-world project delivery.
